PERI QuickSolve | Facade Planner

Planning tool for your scaffolding planning project

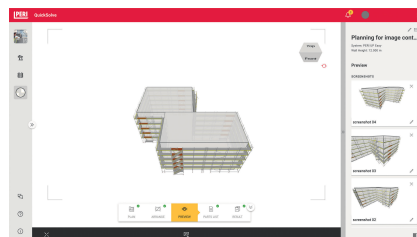

PERI QuickSolve is the quick and easy app for planning PERI UP facade scaffolding, for instance with the PERI UP Easy system. PERI QuickSolve creates solutions for you based on the selections you make, including a 3D view and a parts list. All you have to do is create the building layout in the app and enter some details about your project. The app will do the rest for you. The scaffolding solution is created based on the selected options such as the scaffolding width, preferred bay length, decking type to be used, and many more. You can revise your plan anytime to get a newly generated solution. The web application is available 24/7 and can plan scaffolding solutions for you. It is free of charge and browser-based, so no installation is required. It runs on computers and tablets, making it a solution that is easy to use.

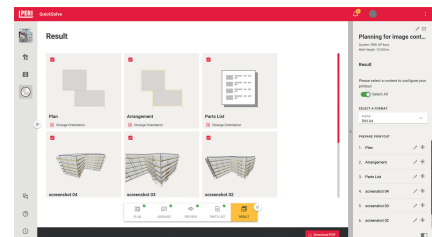

With PERI QuickSolve, you can plan scaffolding requirements for facades, establish material requirements based on the selected parameters and respond flexibly to situations. It can be accessed on computers or tablets and is browser-based, so you can use it regardless of your current location.

The first step is to draw the building layout. Then you can define your scaffolding settings and specify the walls you want to plan a scaffold for.

In addition to a 3D preview of the scaffold, you will also be issued with a list of the items needed to assemble the scaffold.

PERI QuickSolve results are compiled and can be exported as a PDF.

Start to QuickSolve your project:

PERI QuickSolve planning modules are powerful and effective tools enabling you to work faster and thus to be more efficient on your project. With PERI QuickSolve, you have a useful tool at your disposal that makes your life easier.

PERI Quicksolve helps you to simplify your project:

- It is easy to use, planning is very intuitive
- It takes into account your needs and the material of your choice
- It is free of charge and can be used wherever you need it
