

Field Service

Useful Support for the Construction Site Management

Professional on-site briefings

Through experienced PERI assembly foremen and supervisors

Increasing the cost-efficiency

By means of individual on-site project management

Continuous control possibilities

Target / actual performance comparisons for the continuous monitoring of material, time and costs

Transparency and planning reliability

Thanks to site-compliant and comprehensible methods of payments

Professional support

from PERI supervisors and project managers

Site personnel are provided with comprehensive support by the PERI assembly foreman and supervisor to ensure efficient use of PERI system equipment from the beginning onwards.

If necessary, a PERI project manager can also be appointed for large construction sites who helps, in close coordination with the site management, to continually adapt the amount of materials to the actual construction progression. The project manager thereby helps to further optimize material requirements and costs throughout the construction sequences.

PERI Assembly Foreman

- Briefings for the operation and handling of PERI formwork and scaffolding systems
- Explanation of plans and parts lists
- Information on the maintenance, cleaning and storage of PERI formwork and scaffolding systems

PERI Project Manager

- Planning, delivery and management of cost-effective material use
- Organization and coordination of the formwork and scaffolding planning
- Supervising the on-schedule provision of materials
- Coordinating the movement of materials on the construction site
- Organizing the return delivery processes
- Compiling key figure reports on a weekly and monthly basis
